

PROMPT:

Write a simple Python program using if-elif-else statements to calculate the area of Circle, Square, and Rectangle. Display a menu with three choices: 1. Area of Circle, 2. Area of Square, 3. Area of Rectangle. Get the required inputs from the user and calculate the area. If the user enters an invalid choice, display 'Invalid choice'. Use simple beginner-friendly Python code."

Program:

```
print("1. Area of Circle")
```

```
print("2. Area of Square")
```

```
print("3. Area of Rectangle")
```

```
choice = int(input("Enter your choice: "))
```

```
if choice == 1:
```

```
    radius = int(input("Enter radius: "))
```

```
    area = 3.14 * radius * radius
```

```
    print("Area of Circle =", area)
```

```
elif choice == 2:
```

```
    length = int(input("Enter length: "))
```

```
    breadth = int(input("Enter breadth: "))
```

```
    area = length * breadth
```

```
    print("Area of Square =", area)
```

```
elif choice == 3:
```

```
    length = int(input("Enter length: "))
```

```
    breadth = int(input("Enter breadth: "))
```

```
    height = int(input("Enter height: "))
```

```
    area = length * breadth * height
```

```
    print("Area of Rectangle =", area)
```

```
else:
```

```
print("Invalid choice")
```

OUTPUT:

=====

1.Area of Circle

2.Area of Square

3.Area of Rectangle

Enter your choice:1

Enter radius:10

Area of Circle= 314

1.Area of Circle

2.Area of Square

3.Area of Rectangle

Enter your choice:2

Enter length:5

Enter breadth:5

Area of Squqre = 25

1.Area of Circle

2.Area of Square

3.Area of Rectangle

Enter your choice:3

Enter length:5

Enter breadth:4

Area of Rentangle= 20

1.Area of Circle

2.Area of Square

3.Area of Rectangle

Enter your choice:4

Invaild choice
