

PROBLEM STATEMENT

1.Append:

```
fruits=["Apple","Banana"]
```

```
fruits.append("Orange")
```

```
print(fruits)
```

OUTPUT:

```
=====
```

```
['Apple', 'Banana', 'Orange']
```

TEST CASES:1

```
students=["Arun","Bala"]
```

```
new_students=["Ravi"]
```

```
students.extend(new_students)
```

```
print("Updated students=",students)
```

output:

```
Updated students= ['Arun', 'Bala', 'Ravi']
```

TC:2

```
students=["Kavin"]
```

```
new_students=["Mohan"]
```

```
students.append(new_students)
```

```
print("Updated students=",students)
```

output:

```
Updated students= ['Kavin', ['Mohan']]
```

TC:3

```
students=[]
```

```
new_students=["Priya"]
```

```
students.append(new_students)
```

```
print("Updated students=",students)
```

ouput:

```
Updated students= [['Priya']]
```

TC:4

```
students=["A","B","C"]
```

```
new_students=["D"]
```

```
students.append(new_students)
```

```
print("Updated students=",students)
```

output:

```
Updated students= ['A', 'B', 'C', ['D']]
```
