

PROBLEM STATEMENT:7

1.Count()

TC:1

```
students=["Arun","Bala","Kavin","Ravi"]
```

```
position=students.count("Kavin")
```

```
print("Index of Kavin=",position)
```

TC:2

```
students=["Arun","Bala","Kavin","Maha"]
```

```
position=students.count("Maha")
```

```
print("Index of Kavin=",position)
```

TC:3

```
students=["A","B","C","D"]
```

```
position=students.count("A")
```

```
print("Index of Kavin=",position)
```

TC:4

```
students=["Priya"]
```

```
position=students.count("Priya")
```

```
print("Index of Kavin=",position)
```

EX:

```
students=[1,2,3,4]
```

```
position=students.count(2)
```

```
print("Index of Kavin=",position)
```

output:

Index of Kavin= 1

Index of Kevin= 1

Index of Kevin= 1

Index of Kevin= 1

Index of Kevin= 1
